

Recording Video on your Chromebook

Go to youtube.com – Click Upload

Choose a username and pick your gender. (You will only need to pick a username this first time.)
Example: HannahGrade5FC

Choose Public, Unlisted, or Private.

Public: Anyone can search and find your video

Unlisted: If you give them the link to your video they can watch it.

Private: Someone would need the link and their own YouTube channel to watch your video.

Click "Record" next to Webcam capture

Click **“Start Recording”**. You will need to give access to the microphone and webcam.
Click **“Allow”** and **“Remember”**.

When you click **Allow**, you will see another menu come across the top of your screen. Click **“Allow”**.

Click **Close** and it will **start recording**. You can stop and view your video (by clicking the Play triangle under the left corner of your video) and you may **Start Over** if you make a mistake.

When you have a video you like, click **Upload**.

On this next screen, you may change the name of the video and add a description.

Then click “Save Changes” or “Publish”

Clicking on the title will bring you to your video where you can share the link or copy and paste it into a blog or assignment.

****Helpful hint!!** Once you get to the YouTube site for your video, scroll all the way to the bottom and find where it says “Safety” - we had trouble viewing the videos unless we turned the Safety Off.

Looking for your videos later...

Click on the “hotdog” (the three lines next to YouTube on the left corner of your screen) and choose “My Channel”

Then Select “Video Manager”
